

How RAG turns company documents into reviewed replies

Retrieval-Augmented Generation retrieves evidence before drafting. Documents supply context; they do not train the model.

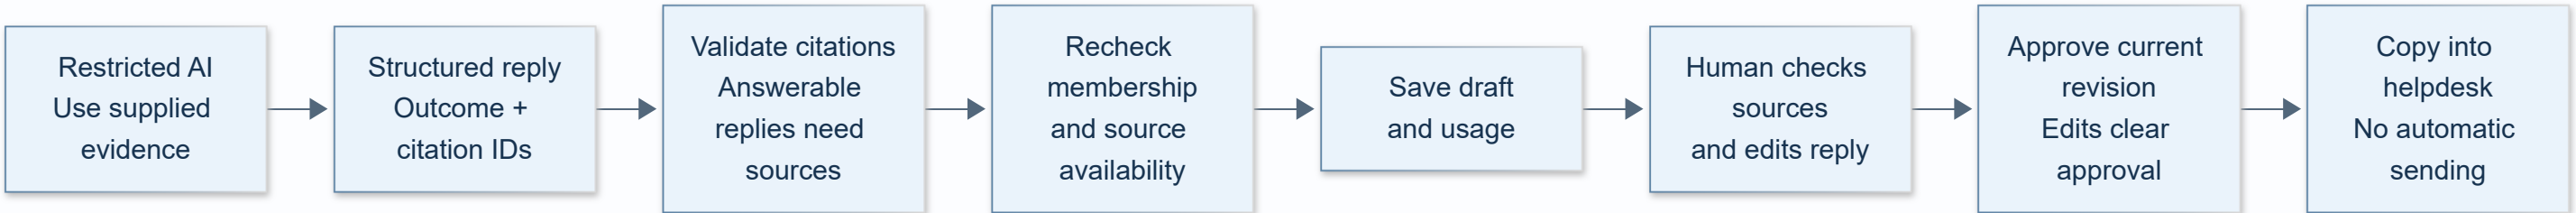

1 Prepare company knowledge

2 Retrieve relevant evidence

3 Draft, validate and review

Why the answers can be more accurate

Overlapping chunks preserve context. Scoped retrieval supplies company evidence. The tool-free drafting agent is instructed to avoid invented facts. Source checks and human approval add safeguards. **A valid citation is not proof that every claim is supported.**

Current setup and verification limits

Keyword search is active; hybrid embeddings are optional. Keyword search can miss paraphrases. Live AI answer quality remains unverified because API credits were exhausted. RAG improves grounding, but does not guarantee accuracy.
